

GERICO ALAGON

Computer Engineer | Fraud Analyst | VA

gericxonstreakz.github.io | +1 (707) 581-6595 | g.alagon1623@gmail.com

OBJECTIVE

A motivated and results-driven international contractor with nearly three years of experience and a strong professional tech-background in Computer Engineering. Experienced in administrative tasks, customer communication, fraud and loss prevention, dispute and claims management, revenue generation, and systems development. Applies technical and analytical expertise to strengthen operations such as improving workflow efficiency, financial protection, and maintain high standards of customer experience and satisfaction.

WORK EXPERIENCE

Whim (Fragile) – Risk Analyst / Tech Support (San Francisco, CA)

Apr 2026 – Present

- Lead the development and centralization of NZXT's previous fraud system into FraudOps during the transition to Whim (Fragile), improving fraud monitoring, operational visibility, and case management.
- With FraudOps it reduced the dispute losses from 13% to 5%, achieving a 95% protection rate across on resolved claims and chargebacks in 2026 (YTD). It also generated 54.13% of 2025's reviewed-order revenue with only 30.20% of its order volume in 2026 YTD.
- Additional features like ticketing system and detailed trends tracking identified emerging fraud trends, including tracking scams, stolen PayPal credentials, and reshipper patterns, strengthening loss prevention and revenue generation.

NZXT – Fraud Analyst (Monrovia, CA)

Nov 2024 – Apr 2026

- Contributed to approximately \$4.5 million in financial impact, including \$1 million in generated revenue and \$3.5 million in protected revenue/loss prevention in 2025.
- Managed fraud disputes and prepared supporting case documentation for chargebacks and claims.
- Reviewed high-risk transactions, investigated fraud patterns, and supported approval and cancellation decisions to minimize financial losses.

Infosoft Consulting Corp – Associate Software Engineer (Internship)

Jan 2024 – Oct 2024

- Supported senior software engineers with administrative and technical tasks, including preparing reports, testing, troubleshooting, and debugging Acumatica ERP implementations based on business requirements.
- Assisted with computer hardware assembly, diagnostics, preventive maintenance, component replacement, and repair.
