## NOTICE

- The SMFA Meat Profiling Website and its content are provided “as is,” with no warranties whatsoever.
- The accuracy and reliability of data on the SMFA Meat Profiling Website depend on several factors, including the promptness and precision of user-provided data.
- The SMFA Meat Profiling Website serves as a resource for meat profiling and should not be the sole basis for decisions regarding meat safety and consumption.
- Users should cross-check the information from the SMFA Meat Profiling Website with independent sources to ensure compliance with all relevant local and national regulations.
- The SMFA Meat Profiling Website is not a substitute for professional guidance or meeting regulatory requirements in the meat industry.
- It is the user's responsibility to use the SMFA Meat Profiling Website in accordance with the terms of service, privacy policy, and any applicable licenses.
- The website may be updated periodically, and users are responsible for utilizing the latest version.
- The SMFA Meat Profiling Website is a supplementary tool and should not be the only resource for critical decision-making.
- Users acknowledge the risk of potential data inaccuracies and assume all risks associated with their use of the website.
- The SMFA Meat Profiling Website and its affiliates are not liable for any losses or damages, direct or indirect, resulting from the use or inability to use the website.
- Users are advised to keep their own backups of essential data and not rely solely on the website for data storage.
- The SMFA Meat Profiling Website is not accountable for any third-party claims arising from the use of the website.
- The website is continuously evolving, and the SMFA reserves the right to implement updates and changes without prior notification.

## CHAPTER I

### Overview

The Safety Meat for All (SMFA) system stands at the forefront of ensuring the integrity and safety of meat products. By embracing advanced technologies for tracking and quality management, SMFA provides robust oversight and transparency throughout the meat supply process. This system is the cornerstone for stakeholders who prioritize safety and quality in meat handling, purchasing and distribution.

Figure 1. Website Overview (Desktop and Mobile Setting)

### Purpose of the manual

This manual serves as a navigational aid and an informative resource for all users of the SMFA system. It aims to empower stakeholders throughout the meat production and supply chain, from farm operators to slaughterhouse administrators and beyond, with the tools and knowledge necessary to harness the capabilities of the SMFA system for optimal functionality. Within these pages, users will find instructions and guidance for managing operations, adhering to safety standards, and engaging with the system's data-rich environment.

### Target audience

This manual is meticulously designed to address the needs of a diverse audience:

- **Superadmins:** For those with overarching control needs, this manual delves into administrative functions, data oversight, and system health monitoring.
- **Meat Transport Vehicle (MTV) Admins:** Specialized information is provided for managing the logistics of transporting meat from the farm to slaughterhouse, ensuring compliance with quality and safety standards.
- **Meat Inspection Admins:** This guide supports those responsible for the quality control and inspection processes at slaughterhouses, outlining procedures for documentation, data analysis, and regulatory adherence.

- **End-users:** From industry professionals to meat purchasers and consumers, this guide provides accessible information on tracing meat origins, understanding quality reports, and ensuring the safety of the products they handle or consume.

By consulting this manual, all users—from those involved in early production stages to informed consumers—will be equipped to participate actively in the assurance of meat safety, fostering trust and transparency from the farm to the slaughterhouse.

### Design Notes

The logo showcases a cattle/cow, symbolizing all animals, emphasizing the focus on meat profiling. Surrounding the cattle are green leaves, representing transparency, purity, and the eco-friendly aspect of the system. The label "Native Quality" assures consumers of the high-quality, genuine meat. Key features like meat and MTV inspection, QR Scanning, Geolocation, and Analytics are integrated into the system, offering a comprehensive and transparent insight into the meat's journey from source to consumer.

Figure 2. The SMFA-NMIS Logo

### Operational Notes

- The SMFA system is designed for legitimate use only. Any attempts to fabricate, alter, or replicate information within the platform are strictly prohibited and will be subject to appropriate action.
- Accessibility to meat Unique Identification (UID) may vary across different markets. Should you encounter markets without meat UID integration, please report these instances through our customer support channels for assistance.
- Access to the SMFA system is reserved for authorized professionals, including Superadmins, Meat Inspector Admins, Meat Transport Vehicle Admins, and other designated personnel such as helpers and drivers. These users must adhere to the prescribed login protocols to ensure system security and integrity.
- Regular updates and maintenance are essential for the optimal performance of the SMFA system. Users should anticipate scheduled downtime and are advised to plan accordingly to minimize disruption to their operations.
- The SMFA system is continuously evolving to adapt to new regulations and industry standards. Users must ensure they remain informed about updates and changes to the system that may affect their workflow or compliance requirements.

## CHAPTER II

### Section 1: Accessing the Safe Meat for All (SMFA) Website

#### For Authorized Professionals

To access the SMFA system, visit [nmis-smfa.gov.ph](https://nmis-smfa.gov.ph). Upon arrival, the landing page presents various sections including the hero page, features and benefits, articles, get started, FAQs, and about us.

To log in, click the '**Log In**' button found in the header. You will be prompted to enter your email and password, or you can opt to sign in with Google. Your account type determines the subsequent webpage you will be directed to, aligning with your professional role.

Figure 3. Login Page Layout

#### For End-Users

Figure 4. Trace Page Layout

Visit [nmis-smfa.gov.ph](https://nmis-smfa.gov.ph) for public access to the SMFA system. The landing page provides an overview, including the hero page, features, articles, how to get started, FAQs, and information about us. To trace your meat's UID, either use the '**Get Started**' button for instructions or navigate directly to the '**Trace Page**' via the header button. There, you can input the meat UID or scan/upload the QR code using your device's camera.

### Section 2: SuperAdmin Controls

#### SuperAdmin Dashboard:

The SuperAdmin dashboard provides a snapshot of system-wide reports and admin activities. It displays the total meat quantity metrics for the current day, the past week, the current month, and the year-to-date.

#### Table Reports for SuperAdmin Dashboard

**Meat Quantity Produced:** This table tracks the monthly time series of meat production for the current year.

Figure 5. Meat Quantity Reports

**Fit for Human Consumption:** Monthly quantities of the current year are shown by species, including cattle, carabao, swine, goat, and poultry varieties, among others.

Figure 6. Total Fit for Human Consumption Reports

| MTV Application Status |                |            |
|------------------------|----------------|------------|
| Karlo Sam Badilles     | Renewal        | completed  |
| Leonax Colls           | NewApplication | pending    |
| Lovely Derama          | Renewal        | processing |
| Pauline Broas          | NewApplication | processing |
| John Angelo Midel      | NewApplication | pending    |
| Jayrald Aparre         | Renewal        | completed  |
| Geraldine Cagboy       | NewApplication | completed  |

Figure 7. MTV Application Status Records

#### User Feedbacks:

This table captures end-user overall feedback on the QR functionality, ranging from highly satisfied to highly dissatisfied.

Figure 8. User Feedback Reports

Section 3: SuperAdmin Analytics

Figure 9. Analytics Filter

Table Reports for SuperAdmin Analytics

Figure 10. Quantity Produced Reports

**Receiving/Acceptance Reports:** This part of the section presents the report on the quantity of meat received, which can be filtered by the number of heads and liveweight.

When configuring the analytics page, filters such as start and end date, species, and time frame are available to assist you in specifying the parameters for the time series analysis section.

**Meat Quantity Produced:** This table displays the monthly time series of meat production, based on the selected filters.

Figure 11. Receiving/Acceptance Reports

Figure 12. Postmortem Inspection Reports

**Postmortem Inspection Report:** This displays the postmortem reports, which can be filtered by various categories such as carcass, lungs, liver, heart, intestines, trimmings, feet, kidneys, and spleen.

Figure 13. Antemortem Inspection Reports

**Fit for Human Consumption:** Quantities are displayed by species, including cattle, carabao, swine, goat, and various poultry varieties, among others, based on the time series parameters.

**Antemortem Inspection Reports:** This section presents the reports for meat categorized as suspect/hold, condemned, and passed for slaughter.

Figure 14. Total Fit for Human Consumption Report

Section 4. SuperAdmin Geolocation

Figure 15. Geolocation Map Layout

**Geolocation Feature:** This feature geocodes relevant addresses on the map to show their locations, which are classified as slaughterhouses, poultry dressing plants, meat cutting plants, among others.

Section 5. SuperAdmin Choropleth Map

**Choropleth Mapping:** A geolocation feature identifies the total meat quantity per location. It provides a heatmap that signifies the range of meat distribution and origin.

Figure 16. Choropleth Map Layout

## Section 6. Users Management & Article Section

**Users Management:** This shows the users table of the website, with their respective roles and information.

**Note:** As a SuperAdmin, you have the options to view, edit and delete users.

| Name             | Role           | Email               | Phone Number | Address                                           | Options          |

## CHAPTER III

### End-Users Guidelines

In Section 1: For End-Users, you will find a trace page layout on the website by clicking the "Trace" button. Here, you can manually input the meat UID or scan/upload the QR code using your device's camera.

The administrators and their stakeholders can generate the report QR Code (Meat UID), allowing end-users (consumers, bulk buyers, etc.) to view information about the meat they are purchasing in the market. Figure 21, shows the sample meat UID QR code with the logo of the system and the UID text-printed for manual input.

UID: UejFTXfe

Figure 21. Sample Meat UID QR-Code

Figure 22. Sample QR-Generated Result

The Figure 22 showcases a sample of meat UID generation for meat information. It displays basic information such as product details, receiving information, inspection reports, farm data, etc. Note that the information provided to the end-user may still be modified by administrators.

Figure 23 illustrates the article section found on the website's landing page, where the SuperAdmin can input a list of articles, reminders, events, news, etc. In this section, end-users can select an article to read at their own pace.

Figure 23. Article Section & Sample Result

## CHAPTER IV

### Set-Up Guidelines (Initiating the System)

This is a straightforward guide for setting up your website powered by ASP.NET. Please follow the steps outlined below to ensure a successful setup.

#### I. System Requirements

The website is developed using ASP.NET.

Ensure the setup is performed by an individual with a background in using C# and ASP.NET.

#### II. Database Configuration

**Local Setup:** It is recommended to use MySQL with SQL Server Management Studio for local development. This setup is ideal for development and testing purposes.

**Online Hosting:** For deploying the website online, you may choose a hosting service such as Hostgator, GoDaddy, or AWS. Select the service that best fits your needs in terms of scalability, reliability, and cost.

#### III. Setting Up the Environment

Local Environment:

- Install SQL Server Management Studio and connect it to your MySQL database.
- Configure the database connection in your ASP.NET project settings.

Online Hosting:

- Choose a hosting provider and create an account.
- Follow the hosting provider's instructions to set up the ASP.NET environment and MySQL database.
- Update your project settings to point to the online database.

#### IV. Deployment

Deploy your ASP.NET application to your chosen environment. For local testing, you can use the built-in server in Visual Studio. For online deployment, use the FTP/SFTP feature of your hosting provider or their specific deployment tools.

#### V. Testing

Ensure that your website is accessible from various devices and browsers such as Google Chrome, Firefox, Microsoft Edge, and others. The website should be responsive and functional on both desktop and mobile devices.

## VI. Maintenance

Regularly update your website and database to incorporate new features, security updates, and performance improvements.

Note:

It is crucial to secure your website and database by following best practices in web development and database management.

For detailed setup instructions and troubleshooting, refer to the documentation provided by ASP.NET, your SQL management tool, and your hosting service.

This guide aims to provide a basic framework for setting up your ASP.NET website. Depending on your specific requirements and environment, additional steps may be necessary.

## CHAPTER V

### FAQs (Software Questions)

#### *I. What are the system requirements to run the website?*

The website is developed using ASP.NET, and it's recommended that the setup is performed by an individual with a background in using C# and ASP.NET.

#### *II. How can I set up the database for the website?*

For local development, it is recommended to use MySQL with SQL Server Management Studio. For online hosting, services like Hostgator, GoDaddy, or AWS can be utilized.

#### *III. How do I deploy the ASP.NET application?*

For local testing, the built-in server in Visual Studio can be used. For online deployment, the FTP/SFTP feature of your hosting provider or their specific deployment tools should be used.

#### *IV. Can the website be accessed on mobile devices?*

Yes, the website is accessible from various devices and browsers such as Google Chrome, Firefox, Microsoft Edge, and others, and is responsive and functional on both desktop and mobile devices.

#### *V. What should I do to maintain the website?*

Regular updates and maintenance are crucial, including incorporating new features, security updates, and performance improvements. It's also important to follow best practices in web development and database management.
